4 CELLS LOW PROFILE

# MOD. PLP ASSEMBLY WITH RAMP

## CHARACTERISTICS

Suitable platform for weighing rolling loads, trolleys or pallet trucks, since the height of the ground to the weighing zone is very low, only 55 mm, and the access ramp has a very low inclination. This platform model, installed on the ground, avoids the construction of a pit and its respective water drainage problems.

Versions in Steel painted with zinc epoxy primer and polyurethane enamel, with 4 cells in nickel-plated steel; Stainless steel AISI 304 versions with glass-jet finish with 4-cell stainless steel.

Built for exclusive use on the ground, this platform is supported by 4 cells that comply with IP68 protection, with CE approval certificate.

Each cell supports in the ground by a pivoting foot, in Steel or Stainless Steel, with a kneecap system that assures a return to the initial position against all the lateral efforts. The cell connection is carried out in an aluminum mixing box, which complies with IP66, from which the connection cable for the display goes out.
